

AlgoSec JumpStart

Quick deployment packages

Select one of the JumpStart packages from AlgoSec to generate value and utilize a business-driven solution for your organization within a short time frame. Regardless of which package you choose, the AlgoSec Delivery department will deploy the solution quickly and cost-effectively within your environment.

JumpStart packages for AlgoSec Firewall Analyzer and FireFlow implementations

	XS	Small	Medium	Large
ACE configuration (if applicable)		✓	✓	✓
Central management installation	✓	✓	✓	✓
Maximum number of network devices	50	150	500	1,000
Active directory integration	✓	✓	✓	✓
Firewall Analyzer knowledge transfer and best practices	✓	✓	✓	✓
FireFlow overview and knowledge transfer	✓	✓	✓	✓
Production readiness verification	✓	✓	✓	✓
Risk profile configuration		✓	✓	✓
Geographic distribution/load distribution deployment				✓
Enhanced knowledge transfer (including intelligence policy tuner)				✓
Timeline (workweeks)	4	8	10	13

Prerequisites for all JumpStart packages above:

- AlgoSec hardware or virtual appliance onsite ready for deployment.
- Successful completion of AlgoSec foundations training for AlgoSec Firewall Analyzer and AlgoSec FireFlow..
- Secure remote connectivity and security device credentials of all deployed devices for remote access.
- Create an AWS IAM role/AZURE AD application for AlgoSec Cloud and set permissions (if applicable).
- Provide AWS account names and role ARNs/AZURE Subscription IDs and AD application details (if applicable).

Topology modeling JumpStart packages	Small	Medium
Network map adjustments	Up to 150 devices	Up to 500 devices
Definition of internet border & extranet connections	✓	✓
Traffic query analysis for accuracy	10 queries	15 queries
Sanity end-to-end traffic simulation	✓	✓
Customization tools for visualization	✓	✓
Preliminary system check & prerequisites review	✓	✓
Project closure & documentation	✓	✓
Timeline (workweeks)	10	20

Prerequisites for topology modeling JumpStart packages:

- Dedicated network SMEs from the Customer's team to assist with topology validation.
- At least 90% of all network devices (up to 150 for Small, 500 for Medium) onboarded before beginning map adjustments.
- Identification of Internet border devices and extranet-connected devices, including next-hop gateways.
- Accurate network diagram depicting regions, interconnections, and key edge devices.
- Predefined list of traffic queries (10 for Small, 15 for Medium) covering major traffic flows.
- Secure remote connectivity and administrative access to relevant network devices.

Additional JumpStart packages

Package	Deliverables	Timeline (workweeks)
AlgoSec Cloud	Manage security policies across multi-cloud environments by onboarding up to 100 AWS/Azure accounts. Includes risk assessment, rule tracking, and policy cleanup.	2
Application visibility (AppViz)	Integration with ASMS, automated application discovery, policy mapping, risk assessment, compliance enhancement	6
IT service management – Small	Integrates AlgoSec FireFlow (AFF) with a 3rd party ITSM (ServiceNow, JIRA) to automate firewall change management. Includes traffic workflow customization, web service-based ITSM integration, and knowledge transfer.	7
IT service management – Large	Integrates AlgoSec FireFlow (AFF) with a 3rd party ITSM (ServiceNow, JIRA) to automate firewall change management. Includes traffic and rule removal workflows customization, web service-based ITSM integration, and knowledge transfer.	12
High availability/Disaster recovery	Deploys high availability (HA) or disaster recovery (DR) for AlgoSec Security Management Suite (ASMS) to prevent downtime and data loss. Supports automatic failover (HA) or manual standby (DR).	2

From project kickoff, assuming all prerequisites have been fulfilled. Service is performed remotely. AlgoSec will use best efforts to complete the deliverables within the target timeframe.

Additional professional services

Beyond the JumpStart packages, AlgoSec offers a range of à la carte professional services to help you maximize your investment. These include:

- **Integration with existing change management systems (CMS)** – e.g., ServiceNow, Remedy, ServiceDesk
- **Solution deployment** – installation and verification of AlgoSec Security Management Suite
- **Advanced configuration** – high-availability, load distribution, geographical distribution
- **Custom report development** – risk profiles, baseline configuration reports
- **Custom workflow development** – change process customization, ticket lifecycle management
- **Project management and customer success management** – ongoing project oversight and support
