

## Partner solution brief

# Manage secure application connectivity within ServiceNow

Integrating your IT service management tool and your application connectivity solution breaks down siloes to help accelerate application delivery and increase your organization's security posture. Application owners rely on tools they already know, while security owners need the application context to ensure that they make the right decisions. Discover the best of both worlds today with the out-of-the-box AlgoSec and ServiceNow integration.

Integrating the AlgoSec platform with ServiceNow lets you:

- Automate security policy change management within ServiceNow
- Enrich your security management with application connectivity details
- Work with your existing processes and workflows and accelerate the adoption of security policy change management

### Automate security policy change management

Change management processes are slow. Processing a single change in a complex enterprise environment can take days or even weeks.

Using intelligent, highly customizable workflows, AlgoSec automates the entire security policy change process – from planning and design through submission, proactive risk analysis, implementation, validation, and auditing – all with zero-touch.

AlgoSec's intelligent automation enables you to reduce change requests processing time to minutes, prevent guesswork and manual errors, reduce risk, and enforce compliance. Integrating AlgoSec with ServiceNow lets you manage the entire security policy change process while remaining entirely within the tool your team is already using: ServiceNow.

## servicenow™

### Key value delivered

-  Rapidly deploy applications through intelligent automation of network security change management processes – all from within ServiceNow
-  Avoid security device misconfigurations and outages
-  Facilitate effective communication between security teams and application owners
-  Tie security incidents directly to application connectivity details
-  Ensure transparency of security statuses, changes and risks throughout your organization
-  Monitor SLA, workload, and other organizational KPIs

## Enrich your security policy management with your application connectivity details

Ensure your change requests have the required fields for your existing business processes. Maintain business-critical information throughout your security policy change process. This provides further context to your security policy change requests to deliver secure application connectivity anywhere.

## Faster adoption of automated security policy change management

By working with the tools that your organization is already familiar with, you don't need to learn new workflows and user interfaces. Continue to use the tools you already know. This accelerates adoption and organizational buy-in for automated network security policy change management.

As a result, you can bridge the gaps between application and security owners and enable application agility while maintaining a strong security posture.

## About AlgoSec

AlgoSec, a global cybersecurity leader, empowers organizations to secure application connectivity by automating connectivity flows and security policy, anywhere.

The AlgoSec platform enables the world's most complex organizations to gain visibility, reduce risk, achieve compliance at the application-level and process changes at zero-touch across the hybrid network.

Over 1,800 of the world's leading organizations trust AlgoSec to help secure their most critical workloads across public cloud, private cloud, containers, and on-premises networks.
