

Deloitte and AlgoSec alliance combines business and technical advisory with the best* Firewall Security Management Solution available in the market

Deloitte and AlgoSec alliance allows to combine **network security consulting expertise** with **network security policy management solutions**, improving network visibility as well as network security management capabilities of organizations. Deloitte EMEA Telecom Engineering Centre of Excellence (CoE) simplifies the adoption process of AlgoSec solutions, providing business and technical advisory, business process transformation, and project management.

Why Deloitte?

Unique fingerprint

Engineering background and **multidisciplinary teams** bridging technical expertise with strategic consulting skills

Independent Advisory

Recommend the best solution for clients working in a close **agnostic cooperation** with major vendors and other service providers

Network Security Experience

Worldwide proven track record of our network protection offering portfolio covering all the **lifecycle of enterprise networks**, aiming to increase security across the entire organization

AlgoSec certified

Knowledge and certifications on AlgoSec solutions, being able to support during implementation, design efficient processes and provide a sustainable onboarding of AlgoSec solutions

Challenges

Deloitte identified common challenges in companies that intend to improve their network security capabilities and security infrastructure. Examples of these challenges are:

- Lack of visibility of the current state
- Absence of network security strategy
- Lack of expertise to properly deploy and operate network security capabilities
- Absence of processes to efficiently maintain and run a network security solution in a long term scenario

In order to overcome some of these challenges organizations should consider the introduction of a solution that provides enhanced network visibility and simplifies firewall security management activities.

AlgoSec's unified network security policy management provides complete visibility across the hybrid infrastructure and into business applications and their network connectivity flows, and enables users to centrally manage the entire change process automatically, securely and effectively while ensuring continuous compliance.

Deloitte has expertise in improving the organization's network security maturity level, delivering consulting services required to define the strategy, design, implement and sustain a network security transformation.

Combined Value

Use Case: Deloitte and AlgoSec have proven their combined value on a major network transformation, where: +7000 rules were assessed; +200 firewalls were on boarded to AlgoSec tool; 150 firewalls were cleaned-up; 15 processes were uplifted; new Capabilities were created and Operational readiness was achieved with improved efficiency and automation

Deloitte.

Deloitte EMEA CoE provides business process transformation capabilities, technical advisory and project management to ensure reliability and sustainability of the AlgoSec solution.

AlgoSec delivers the best* Firewall Security Management Solution, and focus on providing support to customize, deploy and operate the solution aligned with the business' desires.
